Date: September 2011  
RE: Annual Update on Program Review MOU Progress

The following recommendations resulting from the MICS Program Review ((Phase I: <https://portal.pointloma.edu/web/mathematical-information-and-computer-sciences/programreviewi> and Phase II: <https://portal.pointloma.edu/web/mathematical-information-and-computer-sciences/programreviewii>):

1. Revise the curriculum in the Information Systems Major and transform it into a more efficient major in Computer Information Systems.
2. Update the Computer Science and Mathematics curricula to reflect the changes described in the body of the MICS Program Review Phase I and Phase II.
3. Develop in partnership with the other departments in Rohr Science (Biology, Chemistry, and Physics and Engineering) a minor in Computational Science
4. Develop and test hybrid components for existing classes in the department.
5. Phase in the additional assessments of program learning outcomes as describe in our updated assessment plan.

For reference the MOU is attached at the end of this report.

Here is the progress to date on each of the items:

1. The curriculum revisions for the Computer Information Systems major are complete, have been approved by the APC and have been implemented in the curriculum.
2. The curricular changes were submitted to APC in November of 2010, we approved and are being implemented in the 2011-12 academic year.
3. A great deal of work has been done in framing the minor in Computational Science. Lori Carter's sabbatical this fall is focused on further developing the computer science details of the minor including the creation of the material for two new courses. A proposal for the minor will be submitted to APC before the November 2011 deadline.
4. During the summer of 2011 the faculty in the department worked on material for three classes:
  - MTH131 – converting our Maple calculus labs for Calculus II to using the free software Maxima.
  - MTH121 – developing a set of multi-week mathematical modeling problems for this laboratory for Calculus I.
  - MTH203 – Developing a set of technologically mediated materials for this introductory statistics class.

Much of the summer was dedicated to doing a great deal of research to identify possible technology platforms for our material, and to identify the precise exercises and activities that would meet our pedagogical objectives. There were a number of challenges encountered with technology. Two members of our department faculty participated in TILE and it was an informative experience. Unfortunately it made clear that the Blackboard platform does not work effectively with symbolic material. We thus chose to try an experiment using MapleTA, the same platform that we use for our online placement testing.

The material created for MTH121, MTH131 and MTH203 will be tested during the academic year.

5. The new assessments for our MICS assessment program were developed and implemented at the end of the Fall 2010 and Spring 2011 semesters.

**Program Review Memorandum of Understanding  
Mathematical, Information and Computer Sciences Department  
November 2010**

Plan for Improvement: Recommendations from the Program Review:

The following recommendations emerged from the MICS Program Review:

6. Revise the curriculum in the Information Systems Major and transform it into a more efficient major in Computer Information Systems.
7. Update the Computer Science and Mathematics curricula to reflect the changes described in the body of the MICS Program Review Phase I and Phase II.
8. Develop in partnership with the other departments in Rohr Science (Biology, Chemistry, and Physics and Engineering) a minor in Computational Science
9. Develop and test hybrid components for existing classes in the department.
10. Phase in the additional assessments of program learning outcomes as describe in our updated assessment plan.

Action Steps for Implementing Improvements:

The timeline for implementing these changes can be seen in the timeline appendix. Details of the steps needed can be found in the program review (Phase I: <https://portal.pointloma.edu/web/mathematical-information-and-computer-sciences/programreviewi> and Phase II: <https://portal.pointloma.edu/web/mathematical-information-and-computer-sciences/programreviewii>) and in the attached detail for work on hybrid/flipped classes.

Assessment Measures:

- The changes in curriculum for Computer Information Systems, Computer Science and Mathematics will be assessed via the program assessment system for each major. Details can be found in the MICS assessment documents (<https://portal.pointloma.edu/web/institutional-effectiveness/assessment/mics>).

Financial Implications of the Action Steps:

The numbers below correspond to the number of the recommendation above.

1. The Computer Information Systems major makes use of several classes in the Computer Science major. This change has the effect of a net reduction of one half of a full-time equivalent (FTE) faculty member in the department. Because of recent departures and upcoming retirements, this change will be absorbed by not refilling a faculty position in the department.
2. The updates in the Computer Science and Mathematics curricula are cost neutral since the changes involved the elimination as well as the addition of courses and making some previously elective courses required.
3. The development of the Computational Science minor is also cost neutral. Many of the courses in the minor already exist in one of the four departments in the building. There are a limited number of MICS courses needed to be added to the curriculum (Matlab, Python Scripting, Databases for Computational Science) and in revising the curriculum for Math and CS (recommendation 2) the department was able to free up the units needed for this purpose.
4. Develop and test hybrid components for existing classes in the department. This recommendation has a cost associated with it. The main expense is funding for faculty during the summer to develop the hybrid components. There will be limited costs for software and other technical tools that will be paid out of department funds. It is anticipated that the process of creation, experimentation and testing will take 4-5 years. The details related to this process can be seen in the hybrid attachment.
5. Phasing in the additional assessments in the department is cost neutral.

The Provost and the MICS Department mutually agree to pursue these recommendations for the MICS Department. The Provost will provide material and administrative support for the actions taken as the result of the recommendations provided that the MICS Department makes satisfactory annual progress on the initiatives. MICS Department will carry out these actions and submit an annual report of progress.

Signed:

## Hybrid Scoping

### The Classes:

- CSC133 – Introduction to Computer Science and Information Systems (3 units taught once per year)
- CSC181 – Excel (1 unit taught 5 times per year)
- MTH121 – Modeling (1 unit taught once per year)
- MTH131 – Calculus Lab (1 unit taught once per year)
- MTH203 – Elementary Statistics (this is the “service” statistics class) (3 units taught 6-7 times per year)
- MTH303 – Problem Solving (our broad general education class) (3 units taught 12 times per year)

### Content Development Needed:

- Laboratory content moved to hybrid for: CSC133, CSC181 and MTH131
- Information reinforcement and mastery content to hybrid for MTH203 and MTH303

As a department we have outlined the content to be moved to computer format for each course. The basic assumption is that this content will aid in “flipping” the classes, allowing more course time to be focused on problem solving. For some classes there is a significant amount of public domain content available to assist with developing the hybrid modules (CSC181 and MTH203). For others, much of the content will need to be created from scratch (CSC133, MTH121, MTH131 and MTH303).

### Cost

Our scoping indicates that it will take roughly one unit of work to convert partial content for each unit of the class. The one exception to this is MTH131 which may require 2 units for conversion because of some of the complexities of creating content for that particular course.

- 15-20 units of conversion work (at the summer pay cost) spread over 4 summers: \$32,000 (max)
- Additional supplies or equipment for testing interfaces: \$1,000
- Cost of analyzing data, conducting research (students): \$1,500

Total cost is a maximum of \$34,500 (assuming that adjunct pay rate remain the same).

When laboratory fees were increased, the majority of that annual fee increase was “banked” by the Provost’s Office to support research and curricular development in the department. The money that accumulates each year will be sufficient to fund this work. Much of the money in fees has been collected from these particular classes and the conversion work will assist with the laboratory aspects of these classes.

### Timeline

Note that we anticipate the class conversions to be team projects. Multiple faculty members will be involved in the conversion of classes (many working on teams for a single class). We also need to work collaboratively as a team and with PLNU ITS to find the best technological solutions.

If we notice significant positive or negative experimental effects, we may change the time line for the randomized studies of learning outcomes.

### Summer 2011

- Convert MTH131, MTH121, CSC133 and MTH203

### Fall 2011

- Trial run with MTH121 and CSC133
- Trial run with randomized treatments in MTH203

Spring 2012

- Trail run with MTH131
- Trial run with randomized treatments in MTH203

Summer 2012

- Evaluate what was learned from the 2011-12 trials
- Convert CSC181 and MTH303

Fall 2012

- Second trial run with MTH121 and CSC133
- Trial run with randomized treatments with CSC181 and MTH303

Spring 2013

- Second trial run with MTH131
- Trial run with randomized treatments with CSC181 and MTH303

Summer 2013

- Evaluate what was learned from the 2012-13 trials
- Adjust classes as needed

Fall 2013

- Continue gathering data in CSC181, MTH121, MTH203 and MTH303

Spring 2014

- Continue gathering data in CSC181, MTH131, MTH203 and MTH303
- Make determination about continuing the use of hybrids

Summer 2014

- Finalize any changes that need to be made in the material.
